---

### PROFESSIONAL SUMMARY

Fullstack web developer and data engineer who builds fast, modern web applications from database to interface. Founder of Lima Studio Web, where I design and develop custom websites, landing pages, and web systems for businesses. I pair hands-on development (JavaScript, HTML/CSS, modern front-end and back-end stacks) with a strong engineering foundation in SQL, Python, AWS, and data pipelines. Currently pursuing an MBA in Data Science and Analytics at USP/Esalq.

### CORE SKILLS

- **Web Development:** HTML5, CSS3, JavaScript, React, Next.js, responsive design, REST APIs, front-end and back-end development
- **Data Engineering & ETL:** SQL Server, T-SQL, Python (Pandas/NumPy), Informatica, batch processing, scalable inbound/outbound data feeds, file-based integrations
- **Databases:** Relational data modeling, DBMS, query optimization, legacy refactoring (Sybase to SQL Server migration)
- **Analytics & ML:** Predictive modeling, Big Data architectures, Machine Learning for vulnerability analysis
- **Cloud & DevOps:** AWS (cloud infrastructure and deployment); CI/CD pipelines; Git/GitHub (add your key AWS services, e.g. EC2, S3, Lambda, RDS)
- **Practices & Tools:** Git/GitHub, Agile/Scrum, CI/CD, technical ownership of deliverables, L2/L3 production support
- **Languages:** Portuguese (native), English (advanced), Spanish (intermediate)

### EXPERIENCE & PROJECTS

#### Lima Studio Web | Founder & Fullstack Developer | 2025 – Present

- Founded a web studio that builds custom websites, landing pages, and web systems, handling the full cycle from discovery and design to development, deployment, and support.
- Built the website for Agencia CORE ([coreag.com.br](http://coreag.com.br)), a branding agency: responsive, multi-page, modern dark interface, developed with React/Next.js.

#### Customer Behavior Analysis — ETL Pipeline | Facens

- Developed a data pipeline in Python (Pandas) and SQL to analyze transactional and customer data, generating insights on purchasing patterns and segmentation.

#### Predictive Cybersecurity Architecture | MBA Thesis – USP/Esalq

- Built a Machine Learning framework for Industry 4.0, handling high-volume data pipelines for predictive vulnerability analysis.

#### Operational Excellence & Data Governance

- Optimized data pipelines and resolved processing bottlenecks through L2/L3 operations; documented data transformations to ensure regulatory compliance.

### EDUCATION

#### MBA in Data Science and Analytics | USP/Esalq | Expected 2027

- Specialization in Advanced Statistical Modeling, Machine Learning, and Big Data Strategy.

#### Associate Degree in Analysis and Systems Development | Faculdade de Engenharia de Sorocaba (Facens) | 2024

- Focus on Software Engineering, Database Management Systems (DBMS), and Algorithm Optimization.

### CERTIFICATIONS & ADDITIONAL

- Certifications: JavaScript, Java, Python, and SQL for Data Analysis — Udemy. Available for remote work and open to travel.
